

Data-Driven Energy Efficiency

Optimizing your building's energy performance is a sure-fire way to increase efficiency, save money and deliver greater ROI—but with a maze of different vendors and a sea of utility bills where do you even begin?

The Utility Dashboard is a frictionless utility tracking and benchmarking service that gives you objective, actionable data to help you better understand, consolidate and manage your efforts to reduce energy use and expense, eliminating waste and boosting your bottom line.

Our rich data insights and expert analysis will help you drive smarter decision making by helping you answer four key business questions:

How are your buildings doing?

Are buildings getting better or worse?

Where are the best opportunities for savings?

ROI

Have past improvements paid off?

Why GreenPath Energy Solutions?

At GreenPath Energy Solutions, we combine utility analytics with years of experience and expertise to solve complex building challenges. As your trusted local partner, we'll monitor your building and deliver meaningful business insights on how you're doing. And we'll collaborate with you to determine what solutions make sense for your building to ensure you achieve the results you expected.

Accurate, Validated Benchmarking

Our data analytics are powered by EnergyPrint—an industry leader in third-party utility bill aggregation. Utility bills are confusing. Each one is laid out differently, using different datasets and even different units of measure. Our data reporting service standardizes your data across your portfolio—making it an administrative- and worry-free solution. Plus, we guarantee accuracy.

We Do the Heavy Lifting

Our data team works directly with your utility providers to collect, aggregate, normalize and input utility data for your buildings and generate valuable business insights. Once your building is set up, your administrative burden virtually disappears. And your utility data is refreshed every month, so you can routinely monitor performance and find new ways to save.

Contact GreenPath Energy Solutions:

Here's how our data services work:

You authorize our third-party data team (EnergyPrint) to gather data directly from your utilities

We collect 24+ months of utility bill history to set benchmarks, and continuously update your data monthly to keep your buildings current and relevant

We aggregate and validate your data, translating it into one common language

We connect your energy data with ENERGY STAR Portfolio Manager® and export ratings back seamlessly

We'll then document your cost, consumption and carbon using simple business metrics and review your energy analytics on an ongoing basis

Leverage the Power of Utility Analytics

- Spend less time tracking utility bills and more time improving your bottom line
- Document cost, consumption and carbon with simple, user-friendly metrics
- Have a complete, accurate and unbiased understanding of your building's energy use
- Benchmark buildings against themselves, their peers and objective standards
- Seamless and automated integration with ENERGY STAR—making building compliance hassle-free

Driving Results as Your Trusted Advisor

- Communicate building performance from boiler room to the boardroom using one common language
- Data-driven recommendations to improve your building performance
- Report savings using industry-compliant cost avoidance to prove results of implemented solutions
- Continuously collect data and monitor your building to evaluate past improvements and find savings opportunities
- Map out improvement strategies based on utility insight
